EASTSIDE CO

Front End Developer Assessment
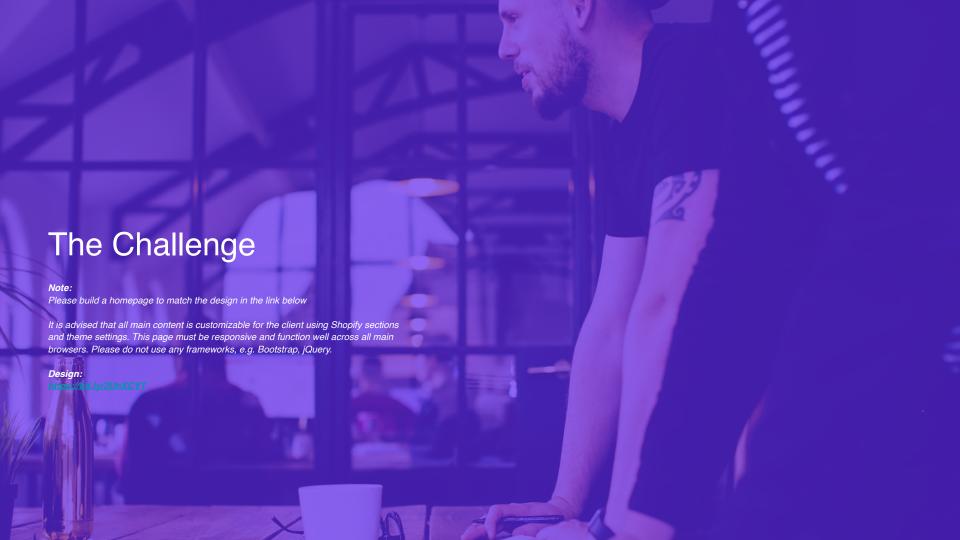

EASTSIDE CO

Thank you for your interest in joining the Eastside Co development team.

In order to help progress your application, we would like you to complete a small coding exercise. This will help us assess your current development level and determine your ability to work at the standard we are currently recruiting for.

You will receive an email invitation to create an account on your development store. There will be a theme under ...dev-store.myshopify.com/admin/themes called "ESC assessment theme". This is the theme we would like you to complete the assessment on.

Please take the time to familiarise yourself with Shopify, Liquid and it's environment before starting any tasks

The Challenge

The Challenge

Header

The header must hide as the user scrolls down and display again when the user scrolls in an upwards direction. (This does not include the vertical logo and social icons)

Please ensure the header links are always readable when they are in view

4x Products Row

These products will need to be created in Shopify as products first.

Please ensure all products have a hover state as shown on the second product

Featured products slider

Pressing the Prev/Next buttons must make the product below change.

Testimonials slider

Pressing the Prev/Next buttons must make the testimonial change. The background image is not part of the slider.

Featured collections (Face masks & Lovely lipsticks)

The images here should be pulling from collections.

The entire image should be clickable. Please use your creativity to add a subtle hover effect to the collections here.

Stay in touch

The newsletter does not need to be functional but please add simple validation to the email input field. e.g. an email must be entered in order to submit.

The Challenge

Responsive

Please demonstrate your ability to translate desktop designs all the way down to mobile.

We will not be assessing your creative work here so don't spend too much time on visuals for mobile, we just want to see that you have followed responsive best practices and that the site still works and is accessible on mobile.

Mobile menu

Please remember to build a mobile menu, this can be as simple or complex as you'd like to make it.

Bonus points

If you would like to add any functionality, transitions or animations to this design then we encourage you to do so. Doing this is not required but certainly welcomed!
